The rebuild is a huge task and not everything can be done at once. SCIRT considers the following in prioritising the rebuild:

1. Operational priorities

– e.g. the condition and importance of the asset, how well it is operating and the ongoing cost of operating the asset.

2. Interdependencies

– e.g. repairing downstream wastewater lines before upstream ones.

3. Key services

– e.g. maintaining access to emergency, medical and educational facilities and major transport networks.

4. External factors

– e.g. influences from other Recovery Strategies (such as Central City Development Unit, social and economic)

5. Constraints

– e.g. the availability of resources and materials.

6. Common sense check

– SCIRT reviews the decision and decides 'is this the right thing to do now?'

> The timeframes are correct as of February 2017.
